The EngageIP Software Solution

Automate. Optimize. Simplify.

EngageIP is a robust billing, rating, provisioning and customer management software solution for IP-based Service Providers.

Specializing in IP-based data and telephony services, EngageIP is tightly integrated with MetaSphere™.

VoIP Telephony Simplified

→ MetaSphere™ Provisioning

→ Eliminate Revenue Leakage

→ Modular Architecture

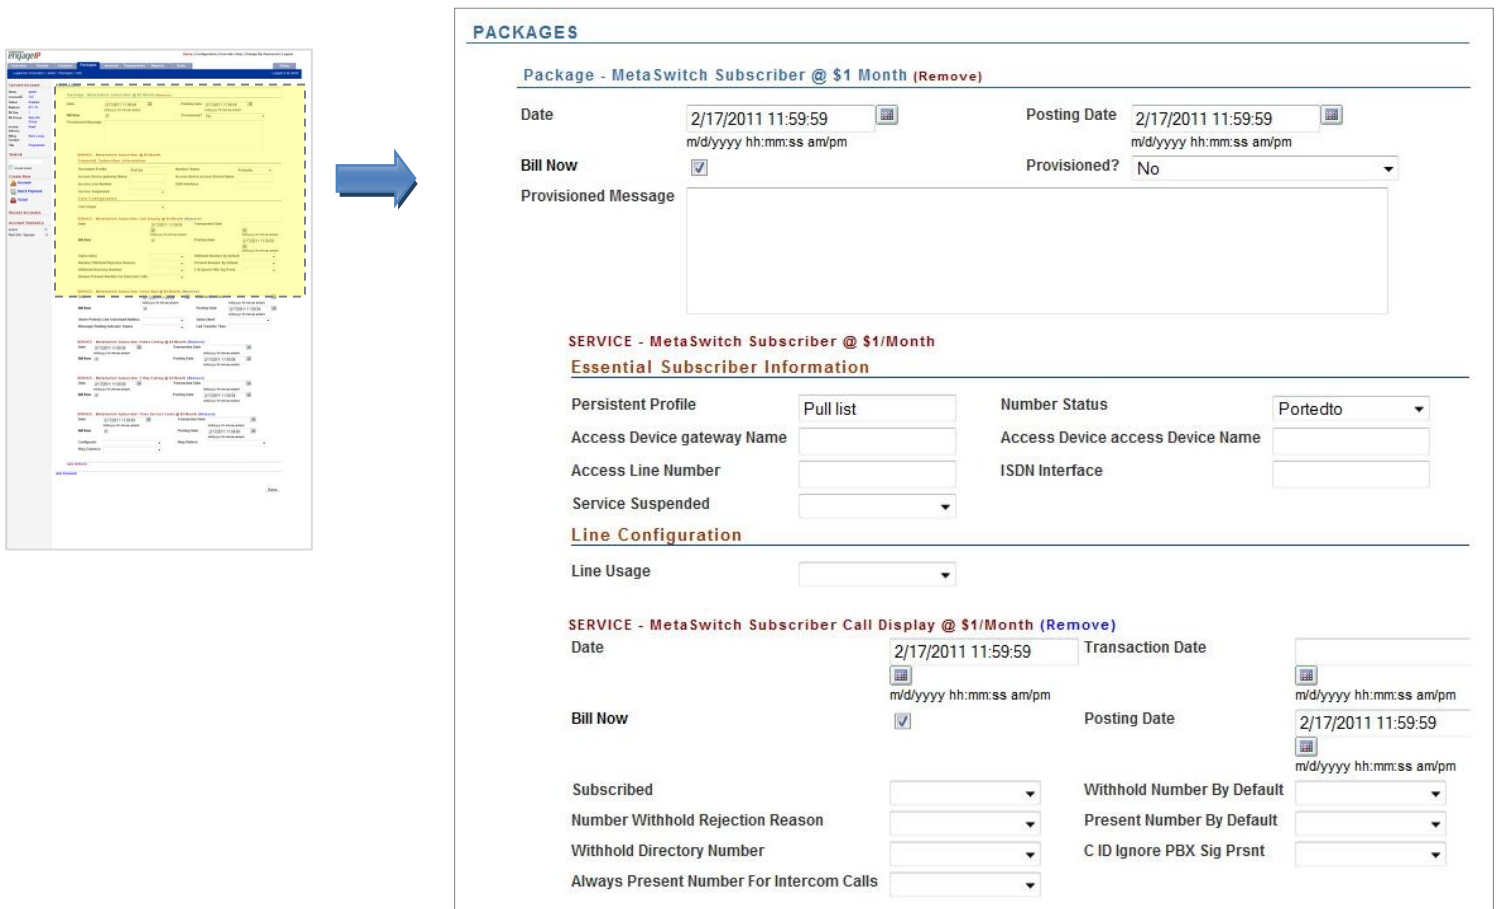

Flexible Provisioning

EngageIP will reliably provision MetaSphere switches. Increase accuracy and efficiency with our customizable provisioning process. Organizations are able to provision Subscribers or Business Groups.

With EngageIP, Service Providers benefit by reducing labour costs, eliminating inaccurate entries as well as ensuring revenue and feature assurance.

Below is a sample screen from EngageIP of Subscriber provisioning. Choose your subscriber attributes you wish to provision. Make fields mandatory and enforce validation. Even create your own custom drop-down lists for increased accuracy, tracking and reporting.

Subscriber Provisioning

The image shows a screenshot of the EngageIP Subscriber Provisioning interface. On the left, a list of packages is visible, with one highlighted in yellow. A blue arrow points from this list to a detailed configuration form on the right.

PACKAGES

Package - MetaSwitch Subscriber @ \$1 Month (Remove)

Date: 2/17/2011 11:59:59
